

DIFFERENT ENTITIES, ONE TEAM

Project Titan
– Team
building
workshop

For any successful project the most important part is cohesiveness and teamwork. It is required for the team to come together & move towards achieving common objectives and hence achieving the goals. This becomes more challenging when there are various stakeholders involved belonging to different work cultures and environments.

Such is the case of Project TITAN – Reliance Cryogenic Ethane Receipt & Storage Facility, Dahej which holds a place of strategic importance for its key stakeholders – Reliance and ONSHORE, LTHE. SAIPem is the engineering partner for the project. Considering that this project is one of a kind as no similar project has been commissioned in such a short duration before, there could potentially be multiple challenges ahead.

Hence, it is very essential for all agencies involved, to work together in a seamless fashion and within stringent timelines, to achieve the set goals. Keeping the above context in mind, a teambuilding workshop for Project TITAN was conceptualized & designed by the Learning & Development team of HR, ONSHORE, LTHE in association with High Places (Renowned Team Building Experts).

The workshop was organized on 16th & 17th October, 2014 at L&T's Leadership Development Academy (LDA), Lonavala. Participants comprised 65 key stakeholder representatives across RIL, SAIPem, ONSHORE's project management team. The workshop was a great mix of classroom and outdoor activities, combined with high quality LDA infrastructure and cuisine which lead to great team bonding and quality interactions between the stakeholders.
